10 Instant Fixes to Boost Speed & Conversion Rates

1. Compress your images - Reduce large image files to improve loading speed without sacrificing visual quality.

2. Remove unnecessary code — Cut unused CSS, JavaScript and libraries to keep your website lightweight.

3. Limit third-party scripts — Only use analytics, tracking and external tools that genuinely add value to your website.

4. Optimise for mobile — Make sure your layout, navigation, buttons and content work seamlessly on smaller screens.

5. Make your CTA obvious — Tell visitors exactly what to do next with a clear and compelling call-to-action.

6. Simplify your navigation — Keep your most important pages easy to find so visitors never feel lost.

7. Make content easy to scan — Use clear headings, readable text and generous spacing to make information effortless to digest.

8. Show why visitors should trust you — Use reviews, testimonials, results or other proof to reduce hesitation.

9. Test every link and form — Check that every button, link and contact form works before sending visitors to your site.

10. Test your website speed — Use a performance testing tool to identify what is slowing your website down.
